

SECTOR SELECT CONCENTRATED EQUITY REVIEW

First Quarter 2017

CONFIDENCE – THE CHEAPEST FORM OF STIMULUS

PERFORMANCE COMMENTARY

We began this ninth year of a great bull market on a strong note with a gain of 6.1% in the S&P 500 Total Return. There are diverging views as to the cause of this rise, ranging more likely from the hope that the enactment of the new President's promises for aggressive fiscal policy initiatives would accelerate economic activity to a post election relief rally naively celebrating the end of discordant political campaigning.

Looking into the internal dynamics of the market's 1Q advance, the signals, considering the magnitude of the move, were less constructive with leadership becoming more conservative. The defensive stocks outperformed the cyclicals (beneficiaries of fiscal stimulus) and large caps outpaced more speculative small cap stocks. Leadership was found in utilities, consumer staples, information technology, health care and consumer discretionary sectors. Relative weakness was in financials, industrials, materials, real estate and energy shares. Analyzing the rotation within the market, concerns over prospects for future economic growth were apparent.

Going forward, the direction of the economy and the market rests on the ability of the new political leadership to enact some sensible fiscal policies. While it is too early to tell, we remain cautiously hopeful that modest progress will be made in stimulating the economy and financial markets will remain attractive.

	Periods Ending March 31, 2017					
	QTD	1 Yr	3 Yrs	5 Yrs	7 Yrs	10 Yrs
Sector Select - Concentrated Equity - GROSS	3.53	6.16	3.82			
Sector Select - Concentrated Equity - NET	3.34	5.96	2.61			
S&P 500 Total Return Index	6.03	17.43	9.99			
Russell 1000 Growth Total Return Index	0.61	1.36	3.02			

Performance figures for periods one year and longer are annualized.

PORTFOLIO COMMENTARY

The investment themes coming out of the Trump victory in November continued to play through the first Quarter. Belief in pending economic stimulation, reduced regulation, lower taxes, and repatriation of overseas monies favored large cap stocks and favored growth over value. There recently has also been a growing awareness that size matters and scale is ever more vital in determining winners. During the quarter **Universal Display (OLED)** had a strong gain of 53%. The leading supplier of organic light emitting diodes for flat panel displays saw strong increase in demand and their outlook for 2017 and beyond was increased significantly. 2015-16 were dismal

years for the biotech sector. In the first quarter of 2017 the combination of cheap valuations and a good flow of new products brought investors back to these stocks. **Vertex (VRTX)** rose 48%. In preparation for anticipated rapid telecommunications demand, fiber optic transmission capacity is being increased significantly. **Dycom (DY)**, +16%, the leading telecommunication construction company, is benefitting with a rapidly growing backlog. **IPG Photonics (IPGP)**, rose 23% on strong growth in sales, earnings and backlog. The technological leader in high power fiber optic lasers provides productivity enhancing products for a broad range of manufacturers.

Underperforming the market was **FARO Technologies (FARO)**, a leading 3D measurement device company with a decline of 1%. It is currently going through a restructuring process which will align new products and a new distribution system. Progress has been slow and positive results are postponed to the second half of 2017. In the infrastructure area, **Martin Marietta Materials (MLM)**, -1%, rose rapidly post election but corrected during the first quarter as investors awaited more certainty on the republican administrations' agenda. **Bristol Myers Squibb (BMY)** fell 6% as data from trials on oncology drugs fell short of expectations. **Unisys (UIS)**, -7%, was off on concerns of a slower than expected turn around in anticipated earnings as the new management team was slow in bringing about change.

PORTFOLIO ACTIVITY

Out of the gate in mid January we sold our position in **United Continental (UAL)**. We think that much of the benefits from industry consolidation, rational fare pricing, and lower fuel costs are waning. We also trimmed our **IPG Photonics (IPGP)** position in March as the price appreciation had pushed it towards the limits of position sizes. We used the proceeds from these sales to invest in **Acacia Communications (ACAI)**, **Oclaro (OCLR)** and **Inphi Corp (IPHI)**. Collectively they comprise a trifecta of companies addressing the demand for faster speed in processing and communicating voice and data. They provide components or systems and semi conductor solutions that enable the telecommunications industry to push data at faster and faster speeds - migrating from today's standard 4G (400 gigabits per second) to 5G (500 gigabits per second). ACIA is focused on providing laser processors and circuits for use in long-haul, local, and inter-data center markets. OCLR provides lasers and optical components for communications networks used by large telecommunications and datacom systems, and operations of hyper scale data center operators. It enables "the cloud" to function more efficiently and data centers to run faster and more efficiently. IPHI offers computer chips that provide high-speed interfaces between analog and digital signals and reduce bottlenecks in transmitting data. The stocks have retreated due to concerns over a short-term slowdown in demand from China. We see this merely as creating an attractive entry point. At the end to the day demand from China will resume, as telecommunications speed is mission critical to competing in today's global economy.

MARKET COMMENTARY

On March 30th on the Charlie Rose show, Larry Summers (ex Secretary of the Treasury under President Clinton), during a discussion on monetary and fiscal policies, stated “Confidence is the cheapest form of stimulus.” A simple but profound observation.

If one looks at monetary policy post the Great Recession, we see a Federal Reserve that by historic proportions flooded the financial system with very cheap money. However, given the lingering psychological wounds from the 2008-9 experience, there was little appetite by consumers and businessmen to avail themselves of this credit. Lenders did not want to lend. Borrowers did not want to borrow. The velocity of money plummeted, reserves in the banking system soared. The expression of pushing on a string had come to pass.

What business and Main Street lacked was a strong sense of confidence. Without it monetary policy was emasculated and the US economy experienced one of the slowest recoveries on record.

We entered the post recession period with a dichotomy in confidence. The election of President Obama brought optimism for the potential for change and a uniting of the country. Juxtaposed was a deep pessimism on economic prospects and lingering fears of a financial relapse.

Eight years later the political euphoria had waned and the country had not come together. Conversely, our financial system had healed and economic stability was at hand. But in both cases there was insufficient confidence to enable satisfactory economic growth.

Currently, the US is presented with the opposite scenario. There is profound pessimism over our political system and Presidential leadership. Conversely, there is optimism that the economy may experience an acceleration of growth. Four years from now, as we look back, we are hopeful that President Trump will have learned on the job and become a more effective leader with moderate legislative successes. The resultant economy will have disappointed and not reached a 3-4% growth rate, but lingered at the 2% rate.

Again, holding back faster growth will be a lack of confidence. Effective fiscal policy addressing the country’s infrastructure shortfalls CANNOT be a Keynesian policy of “digging holes in the ground and then filling them in.” Shovel ready projects do not address our needs. We need commitment to large, long running projects and investment in plant and equipment, not share repurchases or increased dividends, to expand the economy. These projects can only be undertaken by confident business leaders. We are not there yet and prospects are waning.

Thus, we believe the US can expect some modest stimulus from fiscal spending, but smaller and later than the optimists hope for.

The implications of a hopefully better political environment and modestly underperforming economy should be that the next two to three years look much like the past seven; subpar growth (2%), low interest rates, continued political “noise”, and a stock market that continues to climb the wall of worry. We remain ever hopeful that a constructive dialogue can emerge so that confidence builds, but we are ever vigilant to the challenging dynamics of the increasingly complex world we live (and invest) in.

DISCLOSURES:

Princeton Capital Management, Inc. ("Princeton") is an independent investment management firm established in 1988. Princeton is registered with the U.S. Securities and Exchange Commission and based in Princeton, NJ.

Sector Select – Concentrated Equity Composite – (inception date May 2015) representing actual separately managed taxable and tax-exempt equity client portfolios managed on a discretionary basis invested in a concentrated portfolio of 10-20 securities selected from Princeton's Core Equity and Growth Equity Dynamic Interest Lists (eligible securities universes) without client restrictions for the periods indicated.

Performance results are calculated internally using Advent portfolio accounting software. Accounts are included in each composite and its performance at the beginning of the first full calendar month in which the account is fully reflective of the investment strategy. Performance and index valuations and calculations include cash and cash equivalents and also include the reinvestment of dividends, interest and other earnings and are computed and stated in US dollars. All performance figures for periods one year and greater are annualized. Returns are weighted for the size of each underlying account. Gross returns are reported gross of management fees, and net of commissions. Net returns are reported net of management fees and commissions. A client's return will be reduced by our advisory fees and other expenses a client may incur in the management of the client's portfolio. Our advisory fees are disclosed in our Form ADV 2A. Also, there is a compounding effect of advisory fees over time on the value of a client's portfolio. As an example, the deduction of investment management fees would reduce the annualized return for Core Equity for the five years ended December 2013 from 19.4% to 18.7%. Actual investment advisory fees incurred by clients may vary.

The **S&P 500 Total Return Index** gauges the large-cap U.S. equity market. The **Russell 1000 Growth Total Return Index** is an unmanaged index that measures the performance of the large and mid capitalization segment of the US equity universe. These indices are unmanaged and include the reinvestment of dividends and earnings. Inclusion of index information is not intended to suggest that its performance is equivalent or similar to that of the historical investments whose returns are presented or that investment with our firm is an absolute alternative to investments in the index (if such investment were possible). Investors should be aware that the referenced benchmark funds may have a different composition, volatility, risk, investment philosophy, holding times, and/or other investment-related factors that may affect the benchmark funds' ultimate performance results. Therefore, an investor's individual results may vary significantly from the benchmark's performance.

Performance results, and advisory fees, for individual client portfolios will vary due to the timing of investments, additions/withdrawals of funds, diversification guidelines, length of relationship, and size of positions, among other reasons. Past performance is not necessarily indicative of future returns and the value of investments and the income derived from them can go down as well as up. Future returns are not guaranteed and a loss of principal may occur. Views regarding the economy, securities markets or other specialized areas, like all predictors of future events, cannot be guaranteed to be accurate and may also result in economic loss to the investor. For additional information about the performance of the Sector Select – Concentrated Equity Composite or our current fee schedules, please contact Princeton Capital Management.

Any securities listed in this material do not represent all the investments purchased, sold or recommended for client accounts by our Firm and may only be a representative list. Our investments and recommendations may and do change from time to time or at any time. Individual portfolios may have different characteristics due to a portfolio's start date, particular client needs, portfolio manager preferences, or other factors. One should not assume that an investment in any of the listed securities was or will be profitable or equal the performance of the securities listed. Princeton offers to provide a list of all recommendations for the prior one year period on request.

The stocks named as the top or bottom contributors to performance for the period are based on a model portfolio structured to represent the Sector Select – Concentrated Equity Composite. Further detail on the contribution to performance calculation, which takes into consideration the weighting of every holding in the representative account, as well as a list showing every holding's contribution to performance for the period, is available by contacting Princeton Capital Management.

Princeton Capital Management claims compliance with the Global Investment Performance Standards (GIPS®).

A full GIPS compliant presentation and/or the Firm's list of composite descriptions can be obtained by contacting the Firm at (609) 924-6867.
